TRANSMISSION

Secure power for generations

SSEN Transmission is on its way to delivering one of the biggest investment programmes in the north of Scotland for almost a century.

We plan to invest at least **£22bn** in Scotland's electricity transmission infrastructure between now and 2031

Our investment in upgrading the grid could bring a **£15bn** economic boost for the UK, **£7bn** of which would be in Scotland

This investment will support up to **37,000** jobs across the UK supply chain, **17,500** of which will be in Scotland

Contributing to the delivery of over **1,000** new homes in Scotland

Providing more than **£100m** of community benefit funding

We've carried out one of the **biggest** consultation processes that Scotland has ever seen, as we plan the delivery of our Pathway to 2030 onshore projects

To verify how the grid upgrade will enable us to deliver cleaner energy, visit ssen-transmission.co.uk/gridupgrade
